

COMPANY PROFILE

Sri

Sahasranam Energy Private Limited

(A Design & Project Management Consultant and A small-scale EPC Contractor Company)

Specializes in providing integrated solutions & services across:
Smart building infrastructure (MEP | HVAC | IBMS | Surveillance | Illumination | Data-Centre)
Grid electrification (LV/HV Distribution System | HV/EHV Sub-stations)
Renewable Energy (BESS/ Solar/ Wind/ CBG)

CIN - U43299DL2024PTC430500
MSME- UDYAM-DL-06-0121202
GSTIN- 07ABNCS3455N1ZN

About Us

We are the growing **Design & Project Management Consultant and a small-scale EPC Contractor Company** with a focus on providing integrated solutions & services across, **smart building infrastructure, grid electrification and renewable energy sectors** for a wide range of projects. Our services are tailored to meet the specific needs of our clients across various industries.

As a design consultancy, we are providing high-quality engineering and consultancy services. Providing expert, independent advice and assistance to our clients across all project phases—from fundamental studies to the operation of complex facilities—is the foundation of our continuing success. We have specialization in comprehensive design and engineering services to ensure the optimal performance, efficiency, and bankability of solar, wind, and Battery Energy Storage System (BESS) projects.

Our clients can be confident that we will develop a sound basis for decision-making and will assist them in all aspects of their projects up to successful conclusion.

Key Differentiators

- A single point of contact for complete project lifecycle, from design to commissioning and post-commissioning services. Our integrated approach bridges the gap between conceptual design and physical execution.
- Quality Assurance: Adherence to the highest standards of engineering, design, and workmanship, using type-tested equipment and NABL accredited testing.
- HSE First: Strong commitment to occupational health, safety, and environmental (HSE) standards and statutory requirements.
- Experienced Team: A dedicated team of qualified and experienced engineers and skilled technicians.
- Specialized Expertise: We differentiate ourselves through a focus on safety and Sustainability.

Our Mission: To empower modern infrastructure through innovative building automation and sustainable energy solutions.

Our Vision: To be the preferred partner for high-efficiency infrastructure and renewable energy integration by 2030.

Our Core Values: Technical Excellence, Sustainability, Operational Integrity, and Client-Centric Innovation.

Our Services

- Available as Channel Partner.
- DPMC Services
- Owner's Engineer Services
- Pre-bid Engineering
- Detailed Engineering
- Reports & Compliances
- Provide Technical Manpower Support.
- Provide Site Inspection visit.
- Provide Material inspection visit / TPQMA.
- Provide Third Party Audit.
- Cost Control: Optimized procurement through established vendor relationships.
- Project Site Office Construction and set-up.
- Represent your company on your behalf for closure of legacy projects
- Generate Leads as good network with us.
- Support for Mutual Business Growth.

Smart building infrastructure:

MEP/HVAC/ IBMS/Surveillance/ Illumination/ Data-centre

- MEP, HVAC, IBMS & Industrial Projects: We provide design and consultancy for a variety of industrial projects, including panel installation, wiring, and cabling. We also handle fire-fighting and PA systems.
- Illumination Systems: We design, supply, and install lighting systems for substations, roadways, industrial plants, stadiums, townships, and specialized runway lighting for airports. We also install lighting masts.
- Surveillance Systems: We design, supply, and install comprehensive CCTV security and other surveillance systems.
- Data-centre: We provide high-reliability power to critical Infrastructure of Data-centres which requires specialized substations with 2N redundancy. This design ensures continuous operation even during equipment failure or maintenance of one system.
- Deploying IoT-enabled sensors for real-time asset tracking and predictive maintenance. The integration of traditional building services with renewable energy and smart infrastructure for achieving Net-Zero Buildings.

Grid Electrification:

LV/HV Electrical distribution system, HV/EHV Sub-station/ Control panel/ Transformer

- Services for designing and installing robust electrical power distribution systems within industrial buildings and commercial facilities, from the main incoming supply to the end-user points.
- Design and engineering services for electrical substations operating at 66 kV and above, ensuring reliable power transmission and distribution for large-scale projects or utilities.
- Underground and overhead cable laying, termination, and management systems.
- Plant illumination and street lighting/ High Mast Lightening projects.
- Design and manufacturing of a wide range of electrical panels, including HT/LT Panels, Motor Control Centers (MCC), Power Control Centers (PCC), AMF & Synchronizing Panels, APFC Panels, and Control & Relay Panels.
- Type-tested panels (e.g., up to 4000 Amp, 100 kA breaking capacity) conforming to IS/IEC standards.
- Supply, installation, testing, and commissioning of Power and Distribution Transformers (e.g., 3.15 MVA to 31.5 MVA, 33/11kV, Dyn11 vector group).
- Transformer oil filtration and maintenance services.
- These services leverage technology to create smart, sustainable, and cost-effective environments across various sectors, from commercial offices to industrial plants.

Renewable energy

Battery Energy Storage Systems (BESS) design engineering

- Our consultancy services ensure the **seamless integration of BESS with solar and wind projects** to enhance reliability and provide grid services.
- **Load Analysis & System Sizing:** We perform detailed load analysis to determine the optimal size and duration of the BESS, allowing for efficient load shifting, peak shaving, and backup power during outages.
- **Integration with Renewables:** We design BESS to work seamlessly with solar and wind plants, storing surplus energy and discharging it when renewable generation is low, thereby ensuring a continuous power supply.
- **Control System Design:** Our designs include the sophisticated control systems needed to manage the BESS, optimizing its performance for various applications, such as frequency regulation and voltage support.

Solar energy farms design

- We specialize in providing expert design consultancy for a wide array of solar projects, including **rooftop and ground-mounted systems**. Our services are meticulously tailored to maximize energy yield and minimize costs.
- **Feasibility Studies & Site Analysis:** We begin with a thorough site survey to assess solar radiation, shading, soil type, and other geographical parameters. This analysis informs the best project layout and technology selection.
- **System Sizing & Technology Selection:** Based on energy requirements, we design the optimal system size and recommend the most suitable components, including PV modules, inverters, and mounting structures, to ensure long-term performance and reliability.
- **Structural & Electrical Design:** Our detailed engineering designs include the layout of solar panels, cable routing, earthing, and lightning protection. For ground-mounted systems, we provide precise foundation designs to ensure stability and durability.
- **Documentation & Compliance:** We prepare all necessary technical drawings, single-line diagrams (SLD's), and documentation required for permits and approvals, ensuring compliance with local, national, and international standards.

Wind energy farms design

- Our design and engineering expertise extends to the complexities of wind energy. We provide a full range of consultancy services to support the development of wind farms, from initial concept to detailed design.
- **Site Suitability & Resource Assessment:** We conduct in-depth wind resource analysis and site suitability studies to identify the most productive locations for wind turbine installation, optimizing energy capture.
- **Turbine Technology Selection:** We advise on the selection of wind turbine models, considering factors like size, output, and site-specific wind conditions to ensure the project's profitability.
- **Grid Interconnection Studies:** Our designs include detailed plans for connecting the wind farm to the existing power grid, ensuring seamless and stable energy transmission.
- **Civil & Structural Design:** We provide designs for the wind turbine foundations, access roads, and other essential civil infrastructure.

Site mobilization services

Site mobilization services provide comprehensive logistical and administrative support, setting up essential infrastructure like offices, stores, and guest houses, arranging necessary assets like vehicles, PPE, and local teams, and handling crucial compliance such as police verification and hospital tie-ups, all to ensure a smooth, legally compliant, and operational start for a project, especially in construction, events, or remote operations.

- **Site Infrastructure:** Setting up the physical base of operations, including temporary offices, storage areas, and accommodation for staff (guest houses).
- **Logistics & Equipment:** Providing essential transportation (vehicles) **and** mandatory protective gear (PPEs) for workers.
- **Manpower & Support:** Recruiting and deploying skilled personnel (often third-party), ensuring local site understanding, and providing local support.
- **Compliance & Safety:** Arranging emergency medical access (hospital tie-ups) and completing necessary background checks (police verification).

In essence, site mobilization packages all the initial, non-core setup requirements so the main project team can focus purely on the actual work, ensuring readiness, compliance, and efficiency from day one.

Projects Portfolio

Sub-consultancy projects from M/S TRACTEBEL

- Project 1 - FEED services - Greenfield battery energy storage system with a power capacity of 500MW/ 2000MWh and 4 Hr of storage depth, together with associated infrastructure -BESS plant at Al-Muwaih ISP in Saudi Arabia (KSA).
- Project 2 - FEED services - Greenfield battery energy storage system with a power capacity of 500MW/ 2000MWh and 4 Hr of storage depth, together with associated infrastructure -BESS plant at Hadar ISP in Saudi Arabia (KSA).
- Project 3 - FEED services - Greenfield battery energy storage system with a power capacity of 500MW/ 2000MWh and 4 Hr of storage depth, together with associated infrastructure -BESS plant at Khushayb ISP in Saudi Arabia (KSA).
- Project 4 - FEED services - Greenfield battery energy storage system with a power capacity of 500MW/ 2000MWh and 4 Hr of storage depth, together with associated infrastructure -BESS plant at Kahafah ISP in Saudi Arabia (KSA).
- Project 5 - FEED services - Greenfield battery energy storage system with a power capacity of 50MW and 2 Hr of storage duration located in WeiBenthum-kettig, Germany.
- Project 6 – FEED services for bidding support – Al- Sila Wind farm project, Al Dhafra, Abu Dhabi.
- Project 7 – FEED services for tender support for the establishment of 400/220KV HV sub-station project for Amazon Data Centre campus, Mumbai.

Electrical services project from M/s VARDHAN

- MEP and Electrical Services at Amperex Technology Limited (ATL), Sohna Industrial Area, Gurugram (Haryana).
- Site Erection, Testing, and Pre-commissioning of “33 KV Sub-Station (3 Nos. of Switching stations – 38 Nos. of HT panels), Battery & Chargers, Auxiliary Transformers(100KVA), LT switchgear panels, SCADA system for 33 KV Sub-Station, 33KV HT Cabling & Termination (40 Kms), FRP/GI Tray laying (60 Kms), 33 KV RMU Panels(29 Nos.), 33 KV Compact Sub-Stations(8 Nos), 250 KVA DG Set (3 Nos) and other Associate works at HSIIDC - Global City, Gurugram (Haryana).

Site mobilization services project from M/s NTT Data

- Site mobilization services at Maruti Suzuki India Limited (MSIL), Kharkhoda Industrial Area, Sonipat (Haryana).

Associate Partners

- M/s Mithshree Consultants
- M/s Sudha Infrastructure
- M/s Vibhuh Power & Energy Solutions
- M/s Photo Urja
- M/s Yashvik Engineering
- M/s Unified India
- M/s Mahadev Group

Esteemed Clientele

- Tractebel
- Vardhan
- NTT Data

Management Team

S.No.	Name	Qualification	Experience	Position
01	Geeta Jain	Graduate	41+ years	Director
02	Sachin Jain	B.E. (Electrical)	22+ years	Director
03	Amit Kumar Singh	B.E. (Electrical)	22+ years	Associate Director
04	Ritika Gupta	M.C.A.	12+ years	Manager Finance
05	Pawan Goel	B. Com (Graduate)	24+ years	Manager - Commercial
06	Ramsingh	ITI (Electrical)	16+ years	Engineer
07	Chandrashekhar	ITI (Electrical)	26+ years	Supervisor

Company Details

Particulars	Details
Name of the Company	Sri Sahasranam Energy
Status of the Company	Private Limited
Registered Office Address	Plot No. 13, Ground Floor, Pocket - 9, Sector - 22, Rohini, New Delhi - 110086. Near Migsun Rohini Central Mall.
CIN No.	U43299DL2024PTC430500
